

The AI Driving Olympics

Competition summary:

- Machine Learning (ML), deep learning, and deep reinforcement learning.
- Which approaches work best for what tasks and subtasks in a complex robotic system.
- The participants will need to design algorithms that implement either part or all of the management and navigation required for a fleet of self-driving miniature taxis.
- There will be a set of different trials that correspond to progressively more sophisticated behaviors for the cars.

Organizers:

Andrea Censi, nuTonomy and ETH Zürich, acensi@idsc.mavt.ethz.ch
Liam Paull, Université de Montréal, paull@iro.umontreal.ca
Jacopo Tani, ETH Zürich, tani@ethz.ch
Scott Livingston, q@rerobots.net
Julian Zilly, ETH Zürich, jzilly@ethz.ch
Ruslan Hristov, nuTonomy, rusi@nutonomy.com
Oscar Beijbom, nuTonomy, oscar@nutonomy.com
Eryk Nice, nuTonomy, eryk.nice@nutonomy.com
Sunil Mallya, Amazon, smallya@amazon.com
Justin De Castri, Amazon, decastri@amazon.com
Hsueh-Cheng (Nick) Wang, National Chiao Tung University, hchengwang@gmail.com
Qing-Shan Jia, Tsinghua, jiaqs@tsinghua.edu.cn
Tao Zhang, Tsinghua, taozhang@tsinghua.edu.cn
Stefano Soatto, UCLA and Amazon, soattos@amazon.com
Magnus Egerstedt, Georgia Tech, magnus.egerstedt@ece.gatech.edu
Yoshua Bengio, Université de Montréal, yoshua.bengio@umontreal.ca
Emilio Frazzoli, ETH Zürich and nuTonomy, emilio.frazzoli@idsc.mavt.ethz.ch
